

MEMOIVA Program Docs

As of September 24, 2026 — a mobile copy of docs/app/ from the MEMOIVA GitHub repo

There is no multi-week curriculum document. Only Week 1 is real content anywhere in the codebase — weeks 2–8 don't exist in this repo or the other one checked. Everything below is what's actually been designed and built: the app's requirements, the pre/post assessment, the song library, and piano lessons.

CONTENTS

1. Week 1 curriculum — the only real content
2. App requirements (PRD)
3. Pre/post assessment
4. Song library
5. Piano lessons
6. App build status
7. What's needed from you

Week 1 curriculum REAL CONTENT

Theme: Mi hogar / My Home

SPANISH	ENGLISH	PRONUNCIATION
la casa	house	lah KAH-sah
el sol	sun	el SOHL
el árbol	tree	el AR-bol
la flor	flower	lah FLOR

la puerta

door

lah PWAIR-tah

la ventana

window

lah ven-TAH-nah

Identity Close — the closing affirmation for the week:

"Cada semana, mi mente crece más fuerte."

"Every week, my mind grows stronger."

App requirements (PRD)

Approved September 23, 2026. Covers the web app only — the live 8-week Zoom program is treated as fixed context, not redefined here.

Decided

- The app is a **between-session companion**, not used live during Zoom — students practice on their own time; facilitators review before/between sessions.
- Auth is **Supabase magic-link email**, no passwords — friendlier for a 50+ audience. No self-serve signup; a facilitator/admin adds each real student by hand before a cohort starts.
- The pre/post assessment stays external to the app for beta 1's core flow (see below) — building it in is happening anyway per later direction, but wasn't the original plan.

TIMELINE NOTE

The original plan targeted a real beta cohort within 4–6 weeks of approval, built around just finishing the Supabase backend. That's since been superseded — direction has been to keep building scope (assessment, songs, piano) rather than hold to that window. The one thing that hasn't moved: **the real Supabase project still doesn't exist** (see "What's needed from you" below).

Pre/post assessment 7 SEGMENTS

Given week 1 (baseline) and week 8 (comparison), facilitator-administered. Covers all three program pillars plus self-report. Framing rule: nothing is scored pass/fail or presented as measuring decline — always descriptive ("recognized 7 of 10 words"), never diagnostic.

#	SEGMENT	PILLAR	STATUS
1	Warm welcome + song	Music	Facilitator-led
2	Seated movement	Brain Health	Facilitator-led
3	Vocabulary recall	Language	Facilitator-led
4	Conversational prompt	Language	Facilitator-led
5	Piano — color-note matching	Music / Brain Health	Built in-app
6	Confidence self-report	All three	Facilitator-led
7	Closing moment	Engagement	Facilitator-led

Vocabulary list (draft, 10 items)

6 real Week 1 words + 4 draft additions (greetings, family, counting) pending your review: *hola, gracias, la familia, contar del uno al cinco*.

NEEDS YOUR INPUT

- Approve or edit the 4 draft vocabulary items
- The actual song for segment 1 (see Song library below)
- The movement routine for segment 2
- Approve or edit 6 draft confidence statements
- What the video content should show

Song library

A weekly signature song (one per week — "songs every session" is a locked brand decision) plus a browsable public-domain catalog, both in English and Spanish. Lyrics display in big text and highlight line-by-line as the song plays.

Built & working

Database schema, weekly song slot, catalog list, synced-lyrics player — all functional. Legal note: MEMOIVA records its own vocal performances over public-domain melodies, so every recording is fully owned regardless of how old the underlying song is.

NEEDS YOUR INPUT

- The actual Week 1 signature song — no audio exists yet, placeholder shows "Recording coming soon"
- What belongs in the real public-domain catalog (current examples — "Home on the Range," "Cielito Lindo" — are placeholders only)

Piano lessons

Taught entirely on-screen — a color-coded virtual keyboard, tap to play, synthesized tones. No physical instrument or MIDI device needed.

Built, placeholder content

Current color scheme (standard, non-proprietary)

First exercise: the opening phrase of "Twinkle, Twinkle, Little Star" (unambiguously public domain, chosen as a working placeholder).

On third-party methods checked

Two names came up — Stephen Ridley's Ridley Academy (\$1,397–\$2,997 paid course) and "Piano by Pictures" from Gospel on the Go Piano (a separate real, paid product). Neither was replicated: copying a paid competitor's specific proprietary method is a real IP risk. A collaborator is instead writing up an original MEMOIVA method.

SPEC FOR THAT WRITE-UP

- Color (and optional picture) for all 12 notes in an octave
- How a full song becomes a sequence of color/picture cues
- Lesson order — what's taught first, second, third
- What counts as "done" — perfect sequence, or room for retries
- Real song titles, if any, for a public-domain check

App build status

AREA	STATUS
Public website	Live on Netlify
Web app v1 (dashboard, vocabulary, memory game, coloring, progress, check-in)	Built, demo mode
Songs & Piano	Built, placeholder content
Supabase backend code (schema, real data layer, magic-link login)	Written, unverified — no project exists yet
App itself deployed publicly	Not yet

What's needed from you

THE ONE REAL BLOCKER

Create a free project at **supabase.com**, run `app/supabase/schema.sql` against it, then add the project's URL and anon key as environment variables

in the session's environment settings (not pasted in chat). Nothing else here substitutes for this step — it's what lets a real cohort actually use any of this, on their own devices, with data that persists.

CONTENT STILL OPEN

- Assessment: vocabulary review, the song, movement routine, confidence statements, video content
- Songs: the real Week 1 song, the real public-domain catalog list
- Piano: the original method write-up (see spec above)
- A locked beta launch date

Full detail for each section lives in `docs/app/` in the MEMOIVA GitHub repo: `PRD.md` , `assessment-design.md` , `song-library.md` , `piano-lessons.md` , `program-state.md` , `app-architecture.md` , `deployment-and-hosting.md` .
